EDUCATION

Hofstra University, Hempstead, NY

May 2026

B.S. in Computer Science with a concentration in AI
Rabinowitz Honors College

SKILLS

AI/ML: Python, machine learning algorithms, deep learning, NLP, computer vision, regression, classification, clustering
Libraries: Pandas, NumPy, scikit-learn, TensorFlow, PyTorch, OpenCV, Matplotlib, Seaborn, Pillow
Data Science: statistical analysis, probability, EDA, feature engineering, data cleaning, preprocessing, model evaluation
Data/Cloud: SQL, PostgreSQL, MySQL, MongoDB, GCP, Selenium, BeautifulSoup, Docker, Hugging Face Hub
Engineering: Git, GitHub Actions, Docker, CI/CD pipelines, REST APIs, FastAPI, Flask, model deployment, MLflow, model versioning, unit testing, JavaScript

WORK EXPERIENCE

Center for Academic Excellence, Hofstra University

Sep 2023 - May 2026

Student Tutor

Hempstead, NY

- Tutor students in Python, C++, and Java, strengthening debugging, algorithmic thinking, and technical communication.
- Break down programming concepts into clear steps and prepare students for exams using structured problem-solving methods.

Delivery Hobe

Jun 2022 - Dec 2022

Project Management Intern

Bangladesh

- Coordinated 3 product launches across customer service, voice ordering, and website beta testing teams.
- Led stand-ups, tracked blockers, gathered user feedback, and supported 1,000 voice-order confirmations in the first month.

ZSA Interweave

Jan 2021 - Oct 2021

Branding Intern

Bangladesh

- Built a Next.js company website and secured Google verification to improve web presence and discoverability.
- Analyzed audience behavior and campaign performance to help reach 50,000 people and drive 20,000 interactions.

PROJECTS

DeepGuard: Engineered an end-to-end multimodal deep learning pipeline achieving 93% precision on deepfake image detection, leveraging an ensemble of Xception, ResNet, and EfficientNet CNNs for image detection alongside a custom EfficientNet + LSTM architecture for temporal video analysis in Python. Established a production-ready ML evaluation framework by standardizing preprocessing, classification testing, and performance tracking workflows, ensuring consistent and reproducible results across image and video modalities ahead of deployment.

ETF Recommender: Architected a multi-source ETF data pipeline by scraping and ingesting financial data from iShares and StockAnalysis using BeautifulSoup and Selenium, cleaning and normalizing 2,300+ ETF records with Pandas, and persisting structured holdings data to MongoDB with compound indexing. Engineered a GenAI-powered strategy summary engine by designing LLM prompts for Gemini 2.5 to auto-generate plain-English investment strategy descriptions from raw ETF holdings data. Built a semantic ETF similarity recommender using Sentence Transformers and cosine similarity scoring to rank ETFs by holdings overlap and strategy alignment, enabling investment advisors with decision-ready outputs.

Classification Analysis: Built machine learning classification pipelines for phishing URL detection and student performance prediction, achieving 99.98% binary recall and 70.3% multiclass recall using Logistic Regression, Random Forest, XGBoost, KNN, and SVM. Improved model evaluation reliability by applying EDA, feature engineering, manual hyperparameter tuning, F1/ROC-AUC analysis, K-fold cross validation, and overfitting comparison across binary and multiclass models.

Hoftaps: Built a deployable full-stack web application as measured by a working peer-to-peer bookstore by connecting JavaScript, HTML, CSS, and Firebase data workflows for listings and user interactions.

RoboPathFinder: Improved autonomous decision logic as measured by repeatable robot pathfinding behavior by programming low-level control flow and navigation rules in C.

LEADERSHIP AND HONORS

Theta Tau, Hofstra University: Scribe, Brotherhood Chair

Oct 2023 - May 2026

Duke of Edinburgh International Award: Gold, Silver, Bronze

2017 - 2020
